**Doing EDA in Disruptive
Times: Reflections on
Analog and AI**

Rob A. Rutenbar

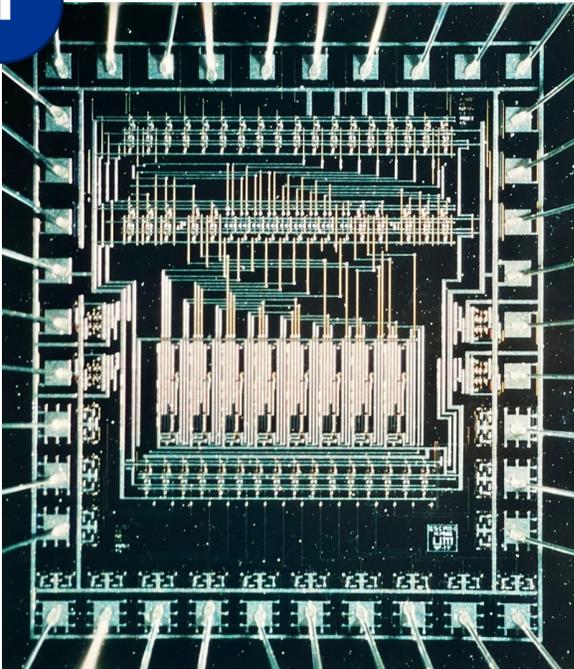

Senior Vice Chancellor for Research
Distinguished Professor of CS & ECE
University of Pittsburgh

A Talk in 3 Disruptions (3 Chips)

Disruption #1

1

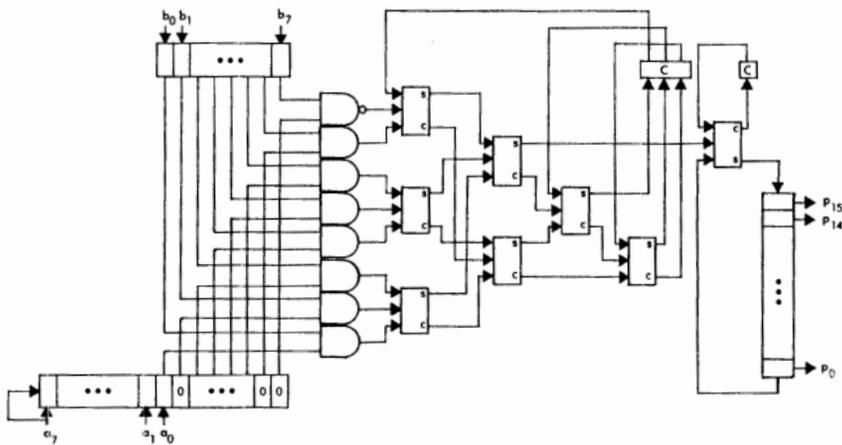

~1980

- $\lambda = 4\mu\text{m}$
- Depletion-mode NMOS
- Single metal
- 503 transistors
- 200KHz
- Fabled by General Motors

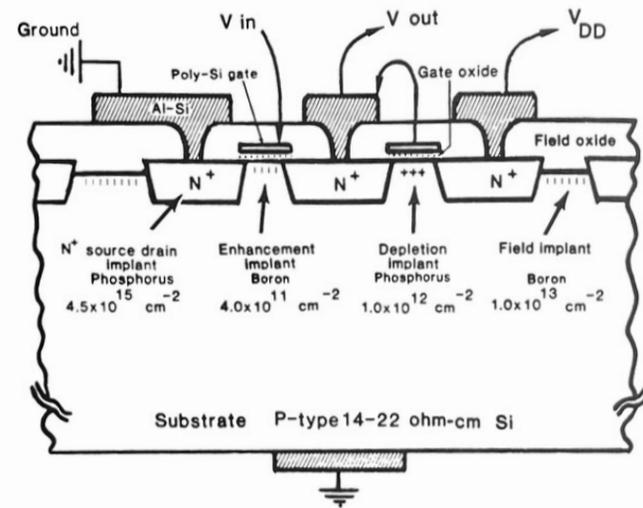

Disruption #1

- Multiply-Add Circuit

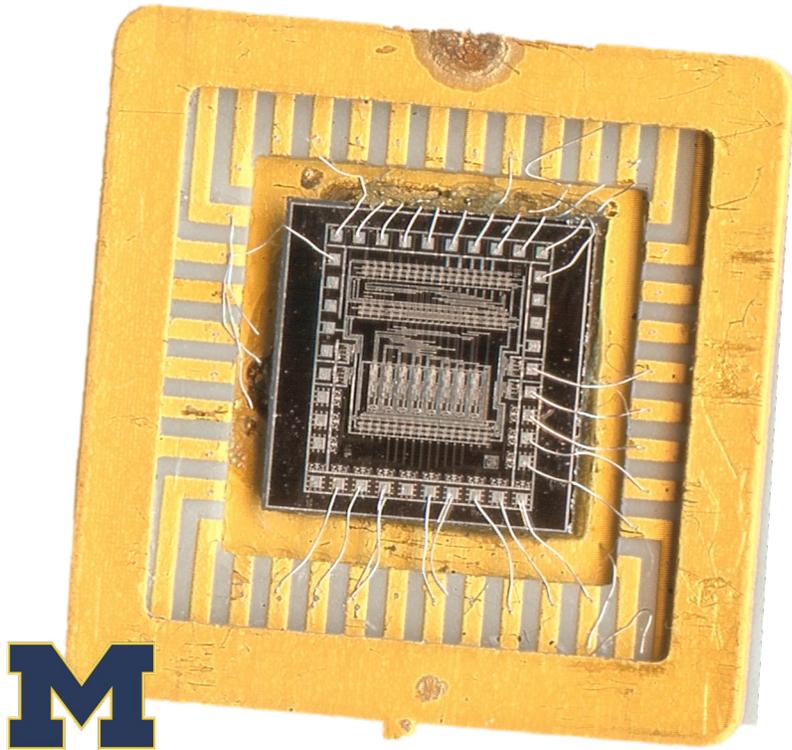

< 100 gates

- Technology

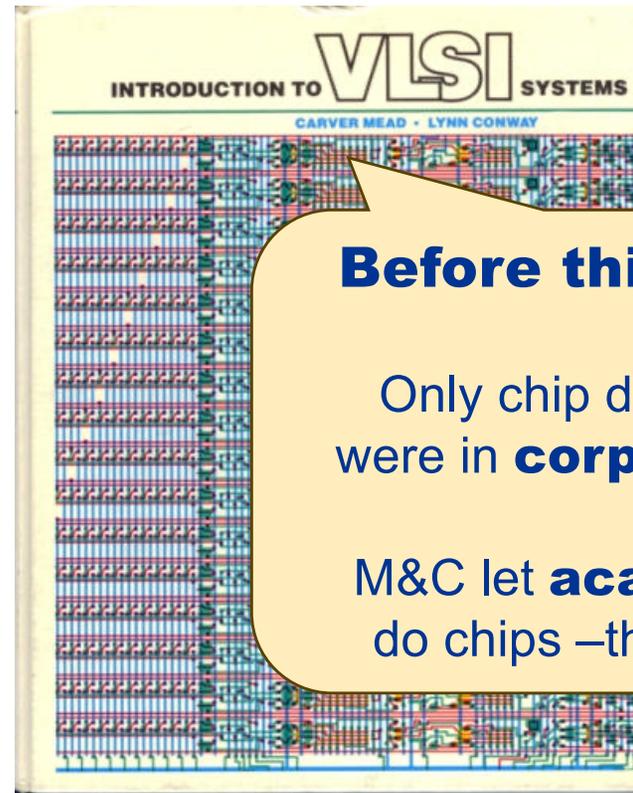

4000nm node (~1/2-CMOS)

Disruption #1: Mead & Conway

M

Pitt Research

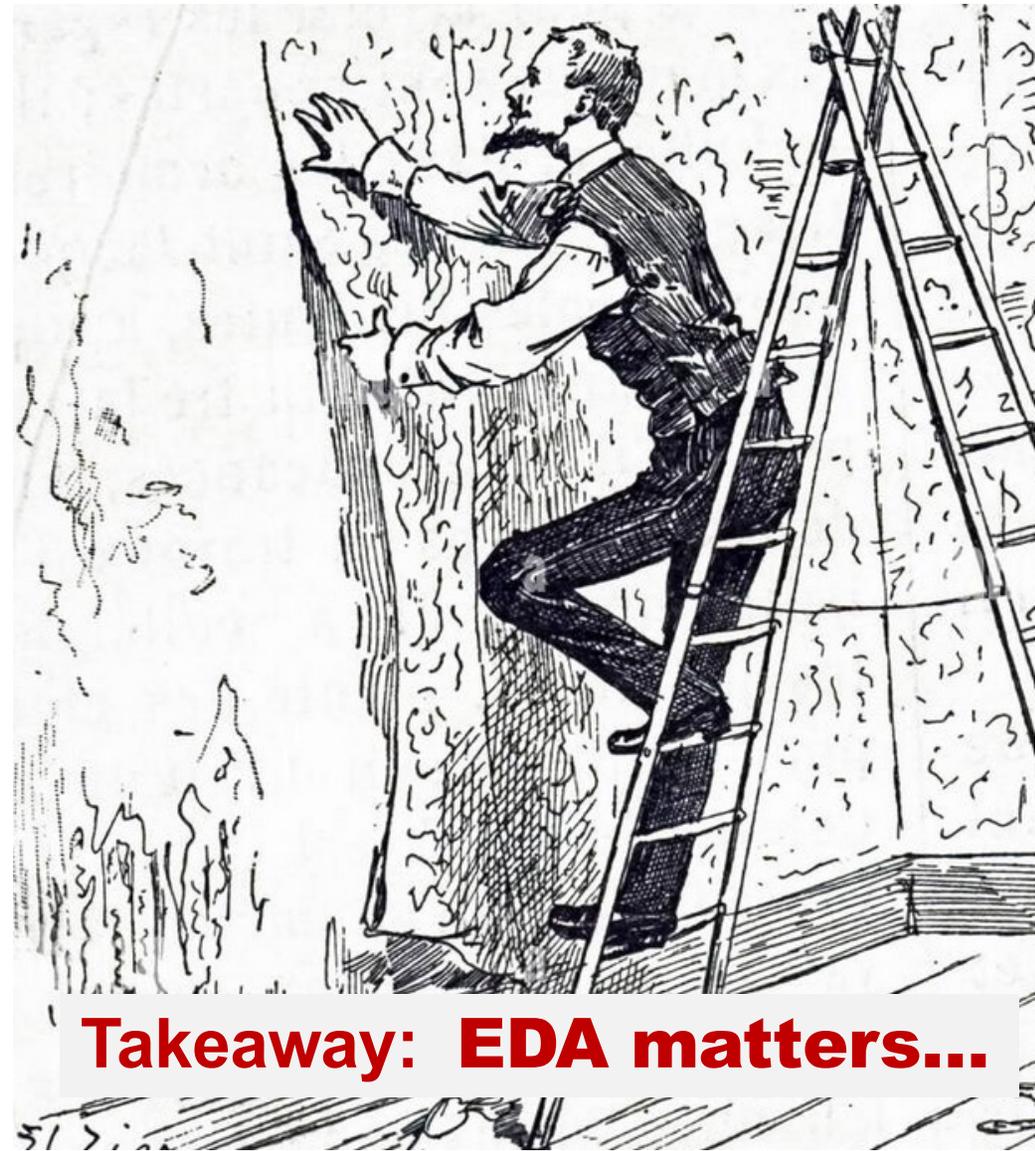

Before this book:

Only chip designers
were in **corporations**

M&C let **academics**
do chips –then **EDA**

~1980 Design Methodology & Toolchain

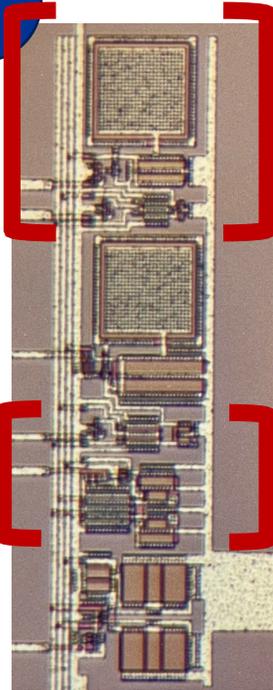

- Ladder
- Line-printer
- Masking tape
- Sharpie
- DRC checker
- BSD Unix "vi" editor

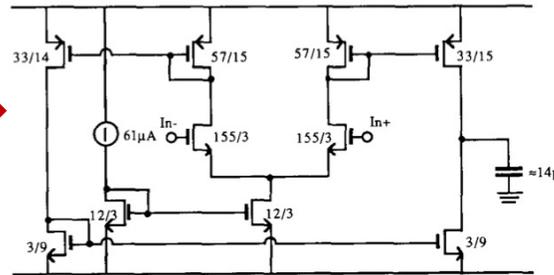

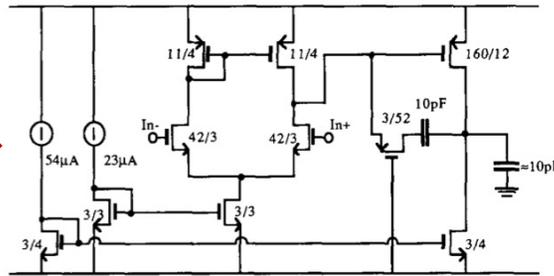

Takeaway: EDA matters...

Disruption #2

2

OTA opamp

2-Stage opamp

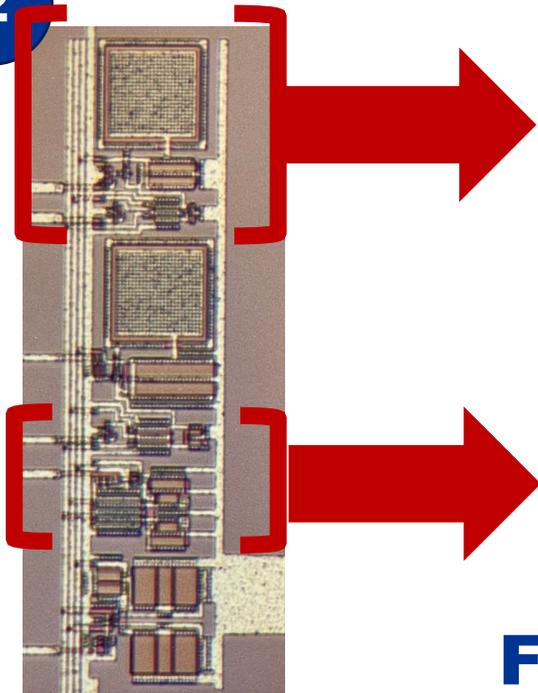

INPUT SPECIFICATIONS AND RESULTS FOR FABRICATED OP AMPS

Parameter	Units	Circuit OTA-1			Circuit 2Stage-1		
		Spec	SPICE Results	Chip Results	Spec	SPICE Results	Chip Results
Gain	dB	≥ 60	60	69.5	≥ 45	45.2	48.4
Unity Gain Freq.	MHz	≥ 1.0	1.25	0.993	≥ 2.8	2.52	2.6
Phase Margin	Deg.	≥ 45	46	43	≥ 60	82	85
Load Capacitance	pF	10	10	~ 14	14	14	~ 14
Supply	V	± 2.5	± 2.5	± 2.5	± 2.5	± 2.5	± 2.5
Slew Rate	V/µS	≥ 2.0	2.1	-1.6/+2.0	≥ 2.5	2.42	-3.0/+4.5
Power	mW	≤ 3.0	0.63	0.62	-	0.56	0.56
Input Offset	mV	-	6.6	11.4	-	16	18.4

1988
3µm CMOS

Disruption #2: Algorithmic Analog EDA

2

**First synthesized circuits
from the CMU analog tools**

Pitt Research

Broader Disruption: *Algorithmic EDA*

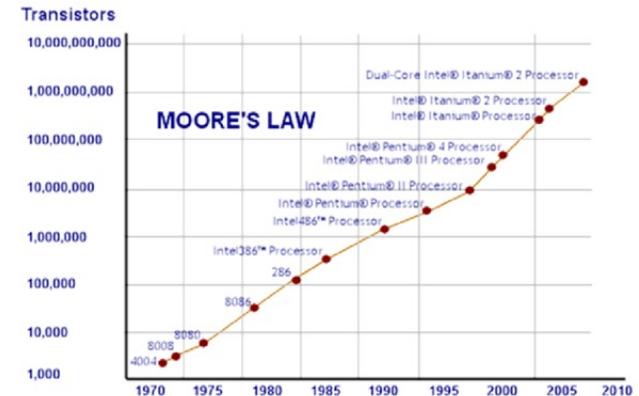

Twin disruptions of 1980s, 90s

- **Moore's law**

- Exponentially better, cheaper **hardware**

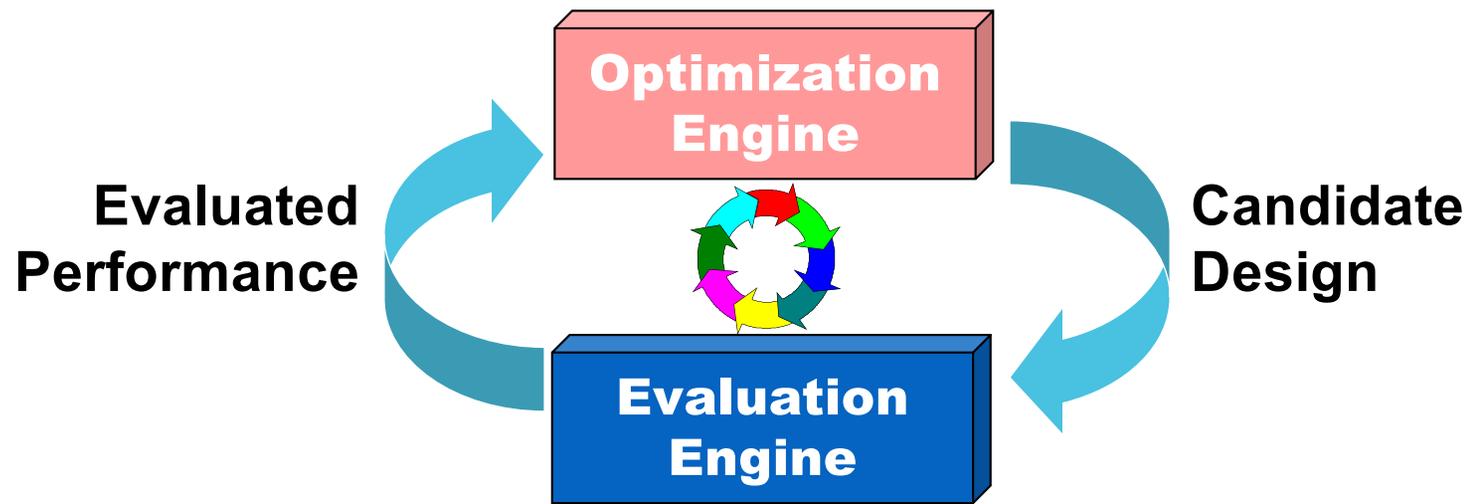

- **Rise of algorithms**

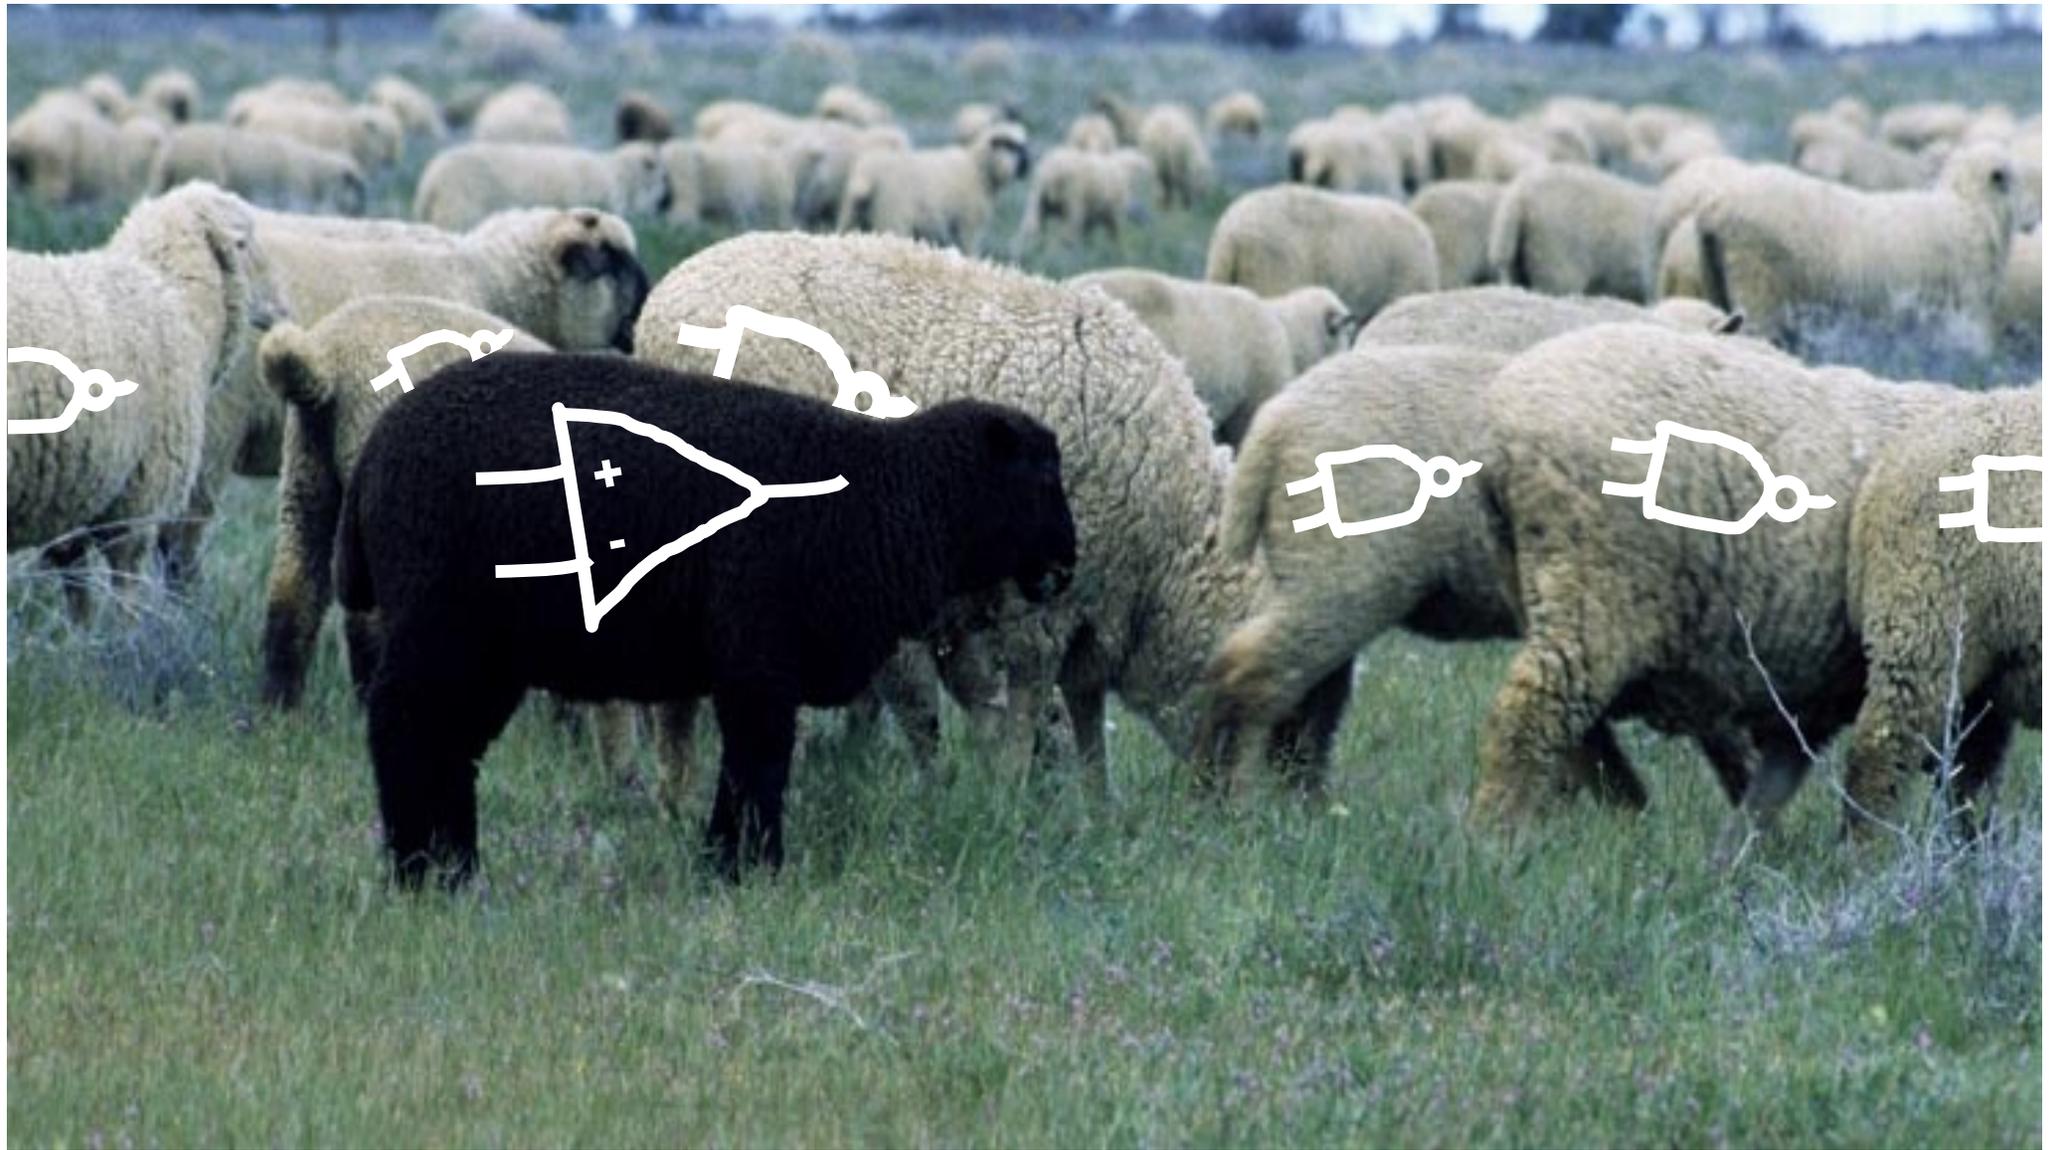

- Model problems **formally, with principled goals**
- Measure, approximate **circuit results, inside algorithms**
- Focus on **accuracy, complexity & efficiency**
- **We apply ideas from optimization**

Synthesis = Algorithms + Optimization

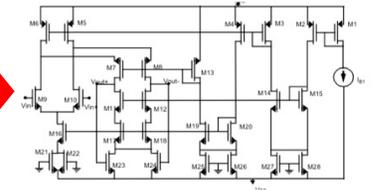

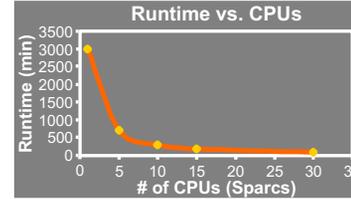

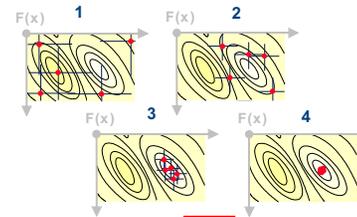

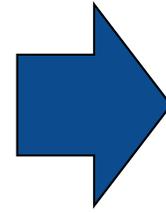

- Smart models & engines to support **principled search** for best design to **meet designer constraints**

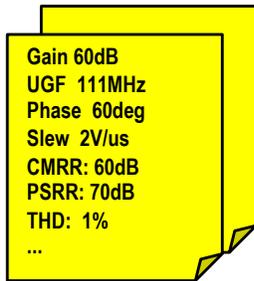

Analog EDA: Fundamental Debate

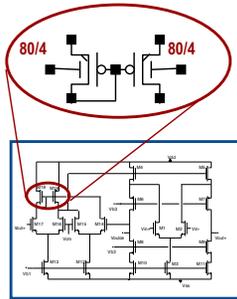

- Analog – it's art, mysterious, all **patterns in my head**
- Nope – it's **optimization**: big hard optimization

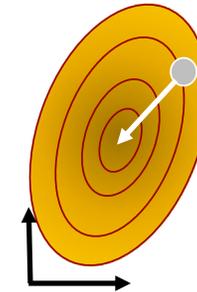

Landscape of “Core” Analog Tools

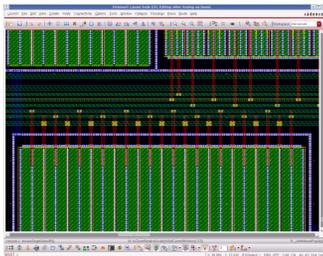

Constraint Capture

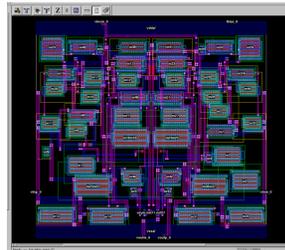

Sizing & Biasing

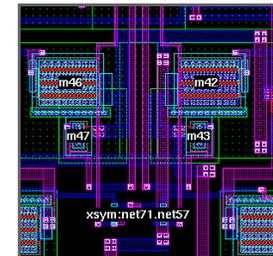

Yield Optimization

Device Gen

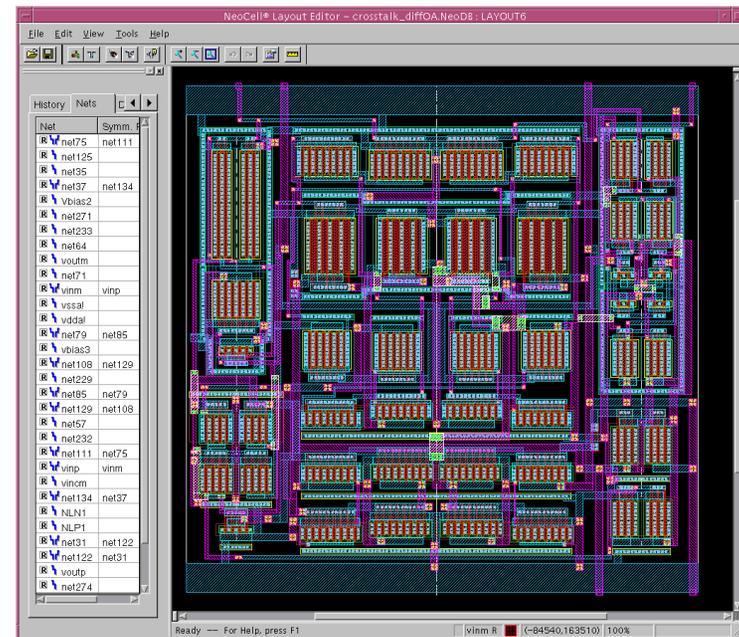

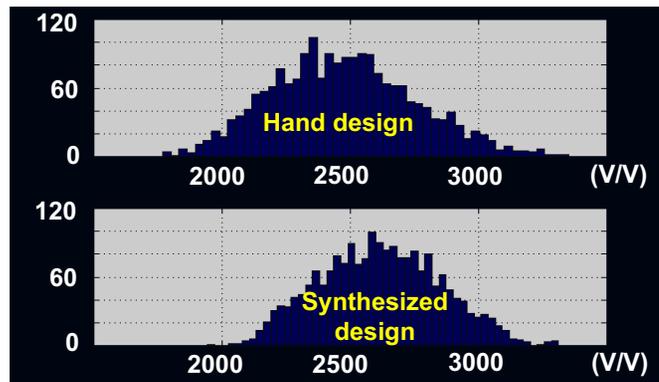

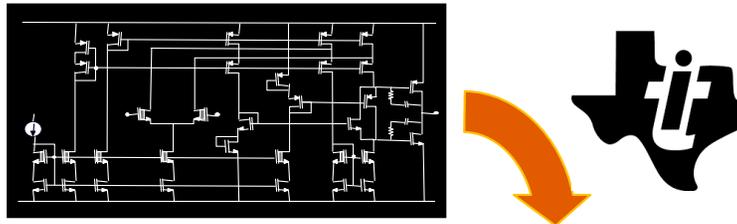

Placement

Routing

Two (Historical) Analog Examples

- Practical Spice-in-the-Loop optimizers for sizing/biasing
- Automatic layouts with both aesthetics & performance

Looking Back....

What did we get **right?**
We did we get **wrong?**

Simplify All EDA into 2-Dim Space

- **Claim***: There are only 2 kinds of EDA tools

2020

A 3mm² Programmable Bayesian Inference Accelerator for Unsupervised Machine Perception using Parallel Gibbs Sampling in 16nm

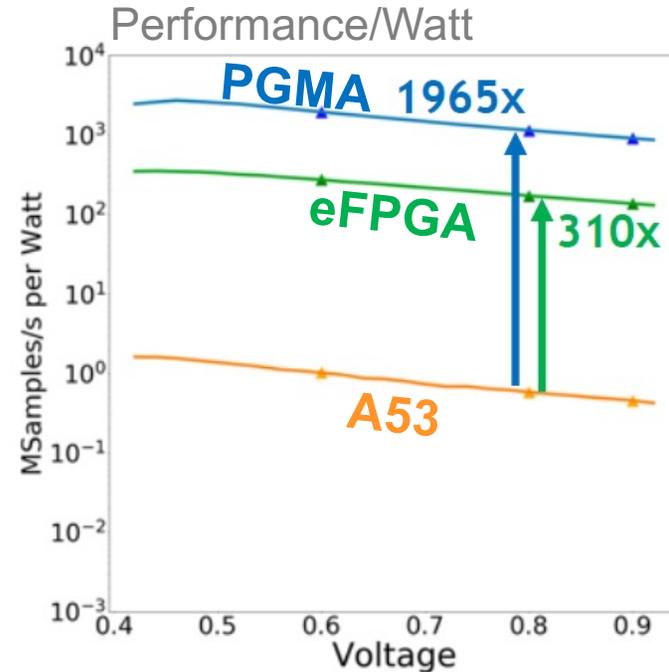

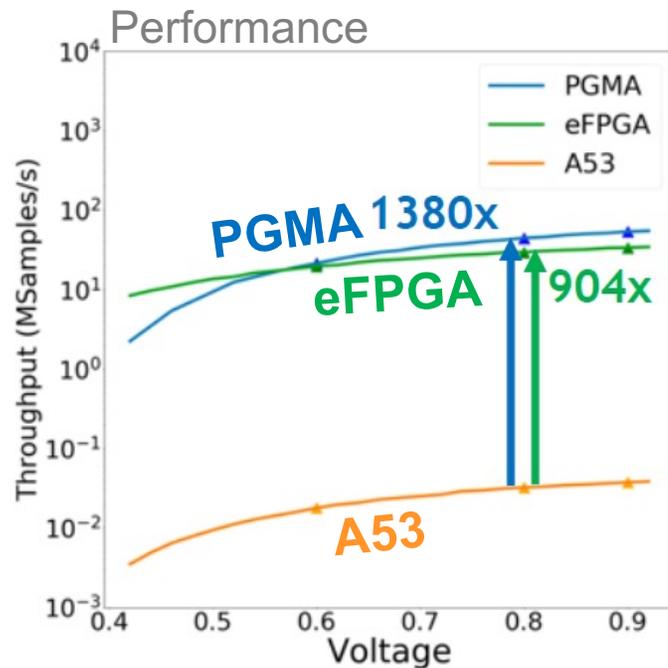

Glenn G. Ko¹, Yuji Chai¹, Marco Donato¹, Paul N. Whatmough^{1,2}, Thierry Tamba¹, Rob A. Rutenbar³, David Brooks¹, Gu-Yeon Wei¹

¹Harvard University, MA, ²Arm Research, MA, ³University of Pittsburgh, PA

- TSMC 16nm FFC
- ~2M gates, 450MHz
- Part of a larger SOC experiment at Harvard called **SM5: ML for IOT**

PGMA vs Arm53 vs eFPGA (on SOC)

- **PGMA: 1000X+ throughput vs CPU; 6X+ ops/W vs eFPGA**

Key Takeaways

- The world **changed** fundamentally in 2012
- **AI** is invading everything, everywhere (even Rob...)
- Even **EDA...**

NEWS AND VIEWS | 09 June 2021

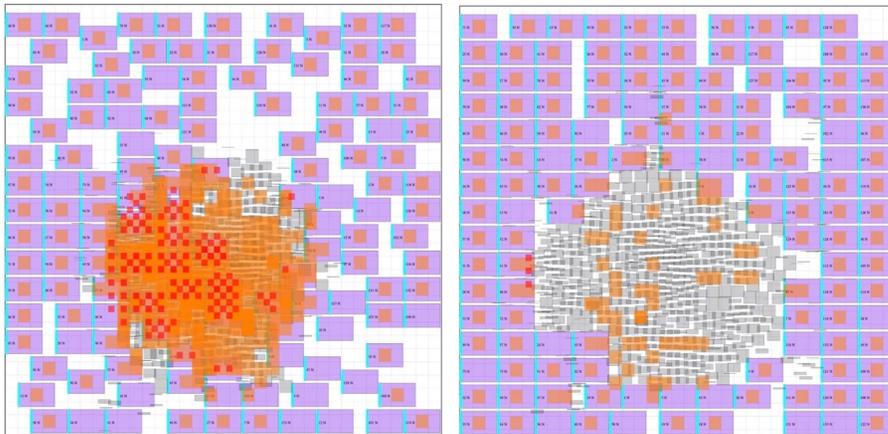

AI system outperforms humans in designing floorplans for microchips

A machine-learning system has been trained to place memory blocks in microchip designs. The system beats human experts at the task, and offers the promise of better, more-rapidly produced chip designs than are currently possible.

EDITORIAL | 09 June 2021

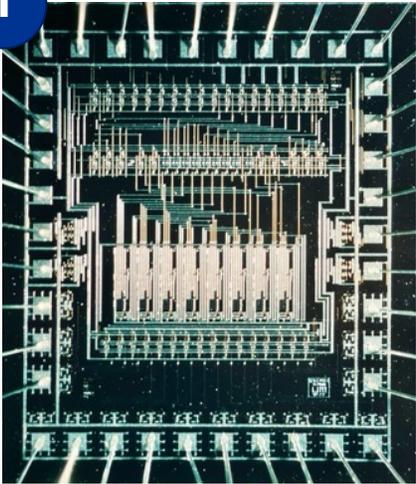

Google's AI approach to microchips is welcome – but needs care

Artificial intelligence can help the electronics industry to speed up chip design. But the gains must be shared equitably.

VLSI CAD MOOCs

- Since 2013, I'm running MOOCs on **VLSI CAD**

Example: 4 pads + Bigger 5-gate Netlist

$$C = \begin{pmatrix} 0 & 1 & 1 & 0 & 0 \\ 1 & 0 & 1 & 1 & 1 \\ 1 & 0 & 1 & 0 & 1 \\ 0 & 1 & 1 & 0 & 1 \\ 0 & 1 & 0 & 1 & 0 \end{pmatrix} \quad A = \begin{pmatrix} 21 & -1 & -10 & 0 & 0 \\ -1 & 4 & -1 & -1 & -1 \\ -10 & -1 & 13 & -1 & 0 \\ 0 & -1 & -1 & 4 & -1 \\ 0 & -1 & 0 & -1 & 3 \end{pmatrix}$$
$$b_x = \begin{pmatrix} 0 \\ 0 \\ 1 \\ 1 \\ 0.5 \end{pmatrix} \quad b_y = \begin{pmatrix} 10 \\ 0 \\ 0 \\ 1 \\ 0 \end{pmatrix}$$

All wire weights = 1
except two highlighted:
gate1 to pad,
gate1 to gate2

VLSI CAD: Logic to Layout

Rob A. Rutenbar

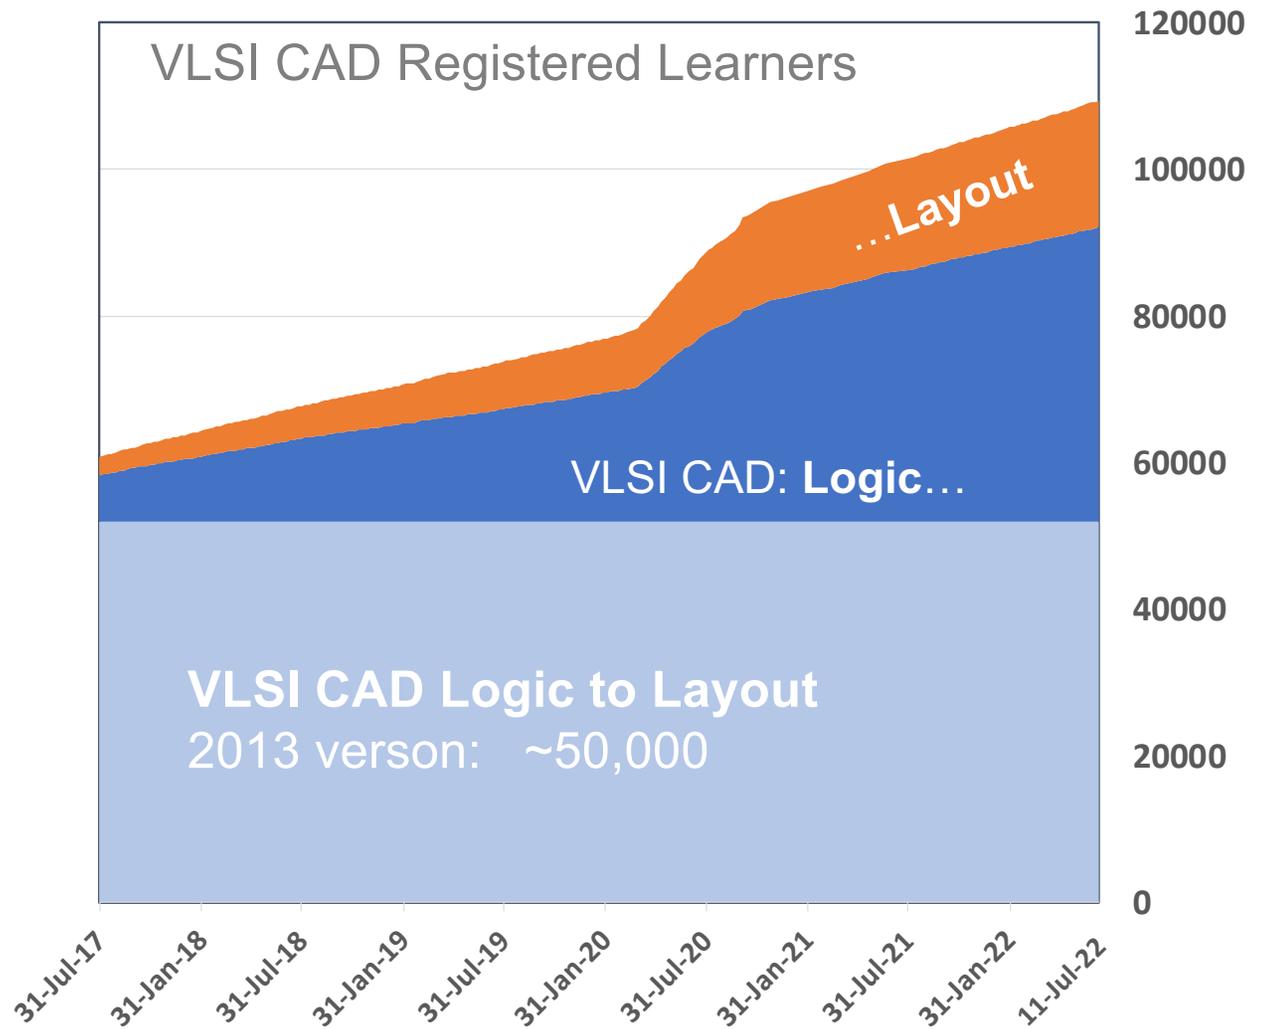

A modern VLSI chip has a zillion parts -- logic, control, memory, interconnect, etc. How do we design these complex chips? Answer: CAD software tools. Learn how to build these tools in this class.
